AMENDMENTS TO THE CLAIMS

1. (Currently Amended) An electronic device comprising:

a mode setting device that sets one of a first mode for a function which is unrelated to

camera functions and a second mode which is related to camera functions; and

a controlling device that prohibits the electronic device from performing camera

functions when whenever said first mode is set by said mode setting device.

2. (Original) The electronic camera as defined in claim 1, wherein said first mode is for at least

one of the following: an audio play function for playing music files recorded in a storage

medium in the camera, an electronic book function, an electronic notebook function, and a

portable phone function.

3. (Original) The electronic camera as defined in claim 1, wherein said controlling device does

not accept an input from a switch of the camera when said first mode is set by said mode setting

device, said switch being provided to a body of the camera for the functions of the camera.

4. (Original) The electronic camera as defined in claim 1, wherein said mode setting device

chooses between said first mode and a second mode for the functions of the camera.

5. (Original) The electronic camera as defined in claim 4, wherein:

said second mode is a camera mode which includes said recording mode and the play

mode; and

the electronic camera further comprises another mode setting device that chooses between said recording mode and the play mode when the camera mode is set.

6. (Original) The electronic camera as defined in claim 4, wherein:

said mode setting device is a slide switch which is locked to set the first mode when the slide switch moves in a first direction; and

said mode setting device is unlocked to alternately set said second operation mode and an OFF mode for turning off power of the camera when the slide switch moves in a second direction which is opposite to said first direction.

7. (Original) The electronic camera as defined in claim 6, wherein:

said second mode is a camera mode which includes said recording mode and the play mode; and

the electronic camera further comprises another mode setting device that chooses between said recording mode and the play mode when the camera mode is set.

8. (Currently Amended) An electronic device comprising:

a mode setting device that sets a first mode for a function which is unrelated to functions of a camera;

a controlling device that prohibits the electronic device camera from performing

functions related to the camera when whenever said first mode is set by said mode setting device;

a lens cover for a taking lens; and

a lens cover driving device that opens and closes said lens cover,

wherein the controlling device controls said lens cover driving device to close said lens

cover when said first mode is set by said mode setting device.

9. (Original) The electronic camera as defined in claim 8, wherein said first mode is for at least

one of the following: an audio play function for playing music files recorded in a storage

medium in the camera, an electronic book function, an electronic notebook function, and a

portable phone function.

10. (Original) The electronic camera as defined in claim 8, wherein said controlling device does

not accept an input from a switch of the camera when said first mode is set by said mode setting

device, said switch being provided to a body of the camera for the functions of the camera.

11. (Original) The electronic camera as defined in claim 8, wherein:

said electronic camera further has a recording mode for recording image data in a storage

medium in the camera, and a play mode for playing an image on a monitor according to the

image data stored in the storage medium in the camera; and

said controlling device controls said lens cover driving device so that said lens cover is

opened when said recording mode is set, and does not move the lens cover when said play mode

is set.

Docket No.: 0879-0316P

12. (Original) The electronic camera as defined in claim 8, wherein said mode setting device

chooses between said first mode and a second mode for the functions of the camera.

13. (Original) The electronic camera as defined in claim 12, wherein:

said second mode is a camera mode which includes said recording mode and the play

mode; and

the electronic camera further comprises another mode setting device that chooses

between said recording mode and the play mode when the camera mode is set.

14. (Original) The electronic camera as defined in claim 12, wherein:

said mode setting device is a slide switch which is locked to set the first mode when the

slide switch moves in a first direction; and

said mode setting device is unlocked to alternately set said second operation mode and an

OFF mode for turning off power of the camera when the slide switch moves in a second

direction which is opposite to said first direction.

15. (Original) The electronic camera as defined in claim 14, wherein:

said second mode is a camera mode which includes said recording mode and the play

mode; and

the electronic camera further comprises another mode setting device that chooses

between said recording mode and the play mode when the camera mode is set.

6

before said lens cover is closed.

17. (Previously Presented) The electronic camera as defined in claim 1, wherein the mode

setting device is physically actuated directly by a user.

18. (Previously Presented) The electronic camera as defined in claim 1, wherein the mode

setting device does not set the first mode based upon a detection of a personal computer cable.

19. (Previously Presented) The electronic camera as defined in claim 1, wherein the first mode

permits portable operation.

20. (Previously Presented) A method for controlling a digital media device comprising:

determining the state of a mode selection device;

establishing one of a first mode of operation and a second mode of operation based upon

the determining, wherein the first mode of operation provides a function unrelated to functions of

a digital camera; and

protecting a taking lens of the digital media device during the first mode of operation.

21. (Previously Presented) The digital media device according to claim 20, wherein the first

mode of operation provides functionality associated with non-image data.

Application No. 09/867,684 Amendment dated November 22, 2005 Reply to Office Action of August 22, 2005 Docket No.: 0879-0316P

- 22. (Previously Presented) The digital media device according to claim 20 wherein the first mode of operation permits portable operation.
- 23. (Previously Presented) The digital media device according to claim 21, wherein the first mode of operation functions without being operably coupled to a personal computer.
